

SHREYASH N. SHIRSAT

8600450268 | dev.shreyashshirsat@gmail.com | github.com/shreyashshirsat | linkedin.com/in/shreyash-shirsat/ | Nashik, Maharashtra

PROFESSIONAL SUMMARY

Computer Engineering student with practical experience in full-stack web development and a strong interest in Cloud and DevOps. Worked on MERN-based applications with real-time features and RESTful APIs, and completed a remote AI/ML training internship. Motivated to build scalable systems and grow in cloud infrastructure and automation.

EDUCATION

Matoshri College of Engineering and Research Center

B.E In Computer Engineering, CGPA: 9.2

Government Polytechnic Nashik

Diploma in Automobile Engineering, 81.44%

2023 – 2026

Nashik, Maharashtra

2020 – 2023

Nashik, Maharashtra

EXPERIENCE

Intern

OpsXpress - Online

Jan 2026 – April 2026

Ahemedabad, Gujrat

- Monitored metrics, logs, and alerts in Datadog to detect and analyze system issues
- Configured Datadog monitors with optimized alert thresholds and notifications
- Created custom dashboards to visualize infrastructure and application performance
- Installed and managed Datadog agents on AWS EC2 and implemented integrations for metrics and log collection

Intern Trainee

Besant Technologies - Online

Sep 2025 – Nov 2025

Nashik, Maharashtra

- Applied core AI/ML concepts: data preprocessing, supervised/unsupervised learning, model evaluation
- Built models using Linear and Logistic Regression, KNN, Decision Trees, and K-Means
- Executed an end-to-end ML project: data prep, training, testing, and analysis
- Gained practical exposure to Python-based ML workflows using real-world datasets

Intern Trainee

NetLeap IT Solutions - Onsite

Jan 2025 – Feb 2025

Nashik, Maharashtra

- Developed a full-stack Uber-like application using MongoDB, Express.js, React, and Node.js
- Implemented JWT-based authentication and secure role-based access
- Integrated Google Maps API for real-time location tracking
- Used Socket.io for live ride updates and communication

PROJECTS

Self-Healing Distributed Cloud Platform | MERN, Docker, Kubernetes, ML

Jan 2026 - Present

- Designing a distributed cloud platform that automatically detects failures and recovers services without human intervention
- Implementing containerized microservices using Docker and orchestrating them with Kubernetes
- Integrating monitoring tools to detect anomalies and trigger self-healing actions

Log Parser | Python Project

Jan 2026

- Developed a Python log parser using the Linux terminal for structured log analysis
- Automated execution with cron jobs to support scheduled log processing
- Created and tested against sample log files to validate accuracy and reliability

Uber-Clone | MERN, Google Maps API, Socket.io, JWT, REST APIs

Jan 2025 - Feb 2025

- Designed REST APIs for users, drivers, and rides
- Implemented real-time communication using Socket.io
- Used MongoDB for storing users, ride history, and locations

TECHNICAL SKILLS

Languages: Python, JavaScript, C, C++

Frontend/Backend: HTML5, CSS3, React.js, Tailwind CSS, Bootstrap

Databases: MongoDB

Tools & Platforms: AWS, Docker, CI/CD, Git, GitHub, Linux, Datadog, Prometheus, Grafana

CERTIFICATIONS & ADDITIONAL

Certificate of Winning - College level Project Competition Winner

May 2026

Certificate of Appreciation - Hacktoberfest Open source contribution

Oct 2024
